

Vimansh Technologies - Backend Intern Assignment

This assignment is designed to evaluate your backend development skills using Django, Python, and SQL. You are expected to build a real-world inspired system with clean architecture, proper logic, and API integration.

Core Task: Job Application System (ATS Lite)

- 1 Create Job API with title and required skills
- 2 Candidate can apply with name, email, and skills
- 3 Store applications in database
- 4 Implement skill matching logic to calculate score (%)
- 5 Return candidates sorted by score

Additional Task: Notification System

- 1 Create notifications when a candidate applies
- 2 API to fetch notifications
- 3 Mark notification as read/unread
- 4 Store timestamp and user reference

Frontend (Basic UI Required)

- 1 Login page
- 2 Job listing page
- 3 Candidate listing page with scores
- 4 Notification display

Bonus Features (Optional)

- 1 Resume upload and parsing
- 2 AI-based candidate summary
- 3 Filtering candidates (score > X)
- 4 Deployment (Vercel/Render)
- 5 Pagination and search

Submission Requirements

- 1 GitHub repository
- 2 README with setup instructions
- 3 API documentation
- 4 Optional deployed link

Evaluation Criteria

- 1 Code quality and structure
- 2 Database design
- 3 API design and integration
- 4 Business logic implementation
- 5 Handling of edge cases
- 6 Bonus features
